

py2app - Create standalone Mac OS X applications with Python

py2app is a Python [setuptools](#) command which will allow you to make standalone application bundles and plugins from Python scripts. py2app is similar in purpose and design to [py2exe](#) for Windows.

Online Resources

There are several online resources to help you get along with py2app.

Mailing list:

<http://www.python.org/community/sigs/current/pythonmac-sig/>

Issue tracker:

<http://bitbucket.org/ronaldoussoren/py2app/issues>

Source code repository:

<https://bitbucket.org/ronaldoussoren/py2app/src>

PyPI Entry:

<http://pypi.python.org/pypi/py2app/>

If you're looking for help, pay special attention to the `examples` folder in the source, which demonstrates many common use cases.
